Quality & Patient Safety

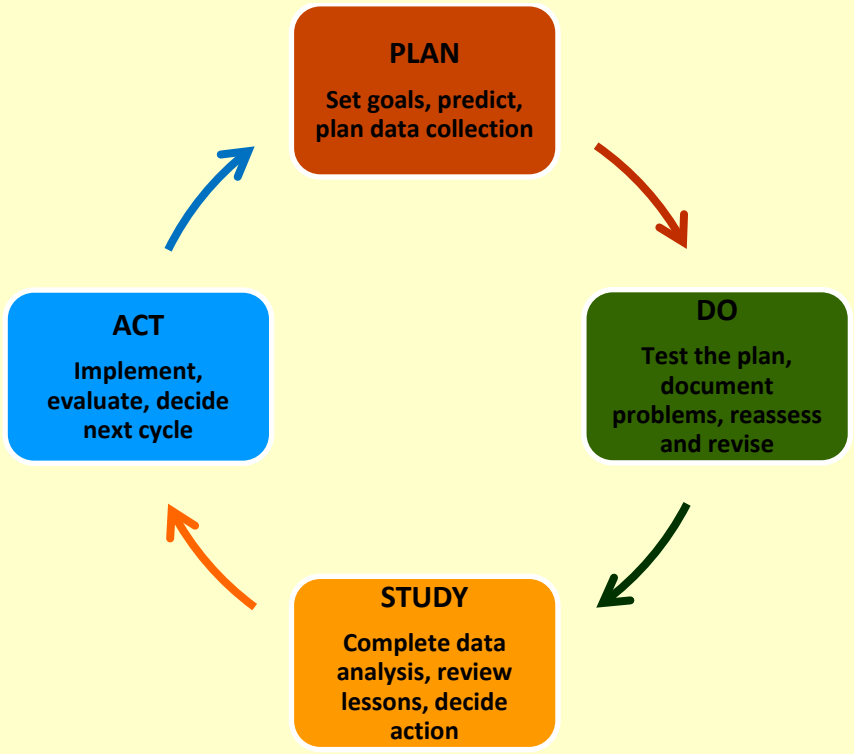
It is envisaged to **transform SVIMS into a "High Reliability Organization"** and **an "Accountable Health System".** Towards that path of transformation & global repute, the Director / Vice Chancellor, on behalf of the institute, has laid out a road-map of value based health care. A major step towards this value proposition is emphasis on quality and patient safety as drivers of health system performance. To drive the performance, a programme of **SVIMS Quality Council (SQC)** is commissioned by the Director for iterative self improvement. Cataloguing, reporting, analyzing and learning from errors has become the lynchpin for quality improvement in health care.

The **SQC** planning process resulted in the formation of nine focus groups and four core groups of workforce consisting of Doctors, Nurses, Administrators, Allied health staff and various other types of employees representing all segments of health system. The focus groups were formed to address: Emergency services, Never events, Medication safety, workforce/workplace safety, fire safety / disaster management, Radiation safety, Hospital Acquired Infections, Blood / injection safety and operating room / interventional areas safety. The four core groups will find sustainable solutions through – Root cause analysis of sentinel events, check lists / communications, accreditations and hospitality services.

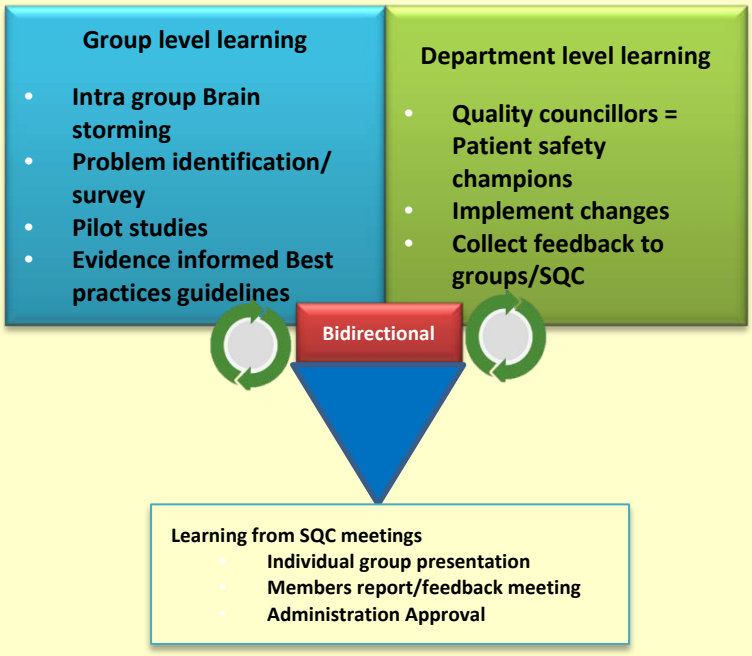
Domains of SVIMS Quality Council

The groups work, on monthly deliverables and share barriers / successes, so as to find culturally competent and substantively sound sustainable solutions. The ultimate goal is to deliver **"Right Care,** to the **Right Patient** by the **Right Teams** in the **Right Place** at the **Right Time**…. ***Every Time***".

PDSA Cycle for Quality Improvement



At SVIMS, a modified PDSA (Plan, Do, Study, Act) cycle is implemented and followed, during & between monthly SQC meetings. This is termed 'Rapid Cycle Bidirectional Learning' as shown below:



This is conceived as a two month cycle of Intra-group learning, Department level learning & monthly SQC meetings.

Tools of Trade

In order to empower ever healthcare worker and to measure performance against the set goals, SVIMS has developed several Tools of the Trade and analytics. One major tool & process is “Structured Mortality & Morbidity (M&M) Review”.

a) Structured M&M format

c) In addition to outlining its unique Quality & Patient Safety initiative through 'SQC', SVIMS took a major step on June 12th 2016, coinciding with the visit of Hon'ble Health Minister, Dr. Kamineni Srinivas garu, in declaring its accountability & transparency in quality improvement and patient-centered care by announcing voluntary public reporting in four domains on 7/12/16 to start with, and reporting of many other areas to follow sequentially.

The four areas were:

1. **Code Blue**
2. **Never Events**
3. **Healthcare Associated Infections**
4. **Biomedical Equipment List and Performance Report**

On 14.08.2017 in keeping with 71st independence day initiatives and coinciding again with Hon'ble Health Minister, Dr. Kamineni Srinivas garu's visit to SVIMS, an additional domain unveiled : Total Hospital Mortality trended over time.

5. **Mortality Rate: a) Net Death Rate (NDR) b) Gross Death Rate (GDR)**

Each of these can be accessed in this quality portal by **clicking here**.

SVIMS CODE BLUE

It is well recognized that preventable deaths occur in hospitals due to ‘failure to rescue’ a patient with deteriorating condition. When cardiopulmonary arrest or acute deterioration of condition occurs, appropriate resources need to be summoned to resuscitate & rescue the patient. This concept is codified in ‘CODE BLUE’. Code blue teams are in existence for many years in health systems of developed countries, but need emphasis in India. Accordingly, under the leadership of SVIMS Director a working group was formed and **CODE BLUE** is launched in June to establish the process. It is formally unveiled on **12-7-2016** by the **Hon’ble HealthMinister**.

Code Blue is a comprehensive process design for emergency responder team and response process to rescue patients and other personnel in the hospital premises. When the person sustains cardio pulmonary arrest or experiences sudden deterioration on physiologic condition Code Blue activates the afferent limb of recruiting the necessary personnel and equipments and medicines as well as the efferent limb of the response and post – responsemanagement.

Code Blue has been evolved for integration of all the stakeholders i.e., Emergency physician, Cardiologist, Anaesthetist, Emergency Nurse, ICU physician, Orderly for transportation, Pharmacist, as well as Nurse Manager, Security Officer, Medico Social Worker and Telephone Operator while attending to an emergency situation. Necessary resuscitation medicines, gadgets, including defibrillator will be made available with alacrity. Resuscitation training is imparted to all first responders.

Code Blue may be initiated from any in patient or out patient service areas of the SVIMS hospital by dialing 2525 in the intercom. The 2525 call is only for code blue to mobilize emergency responder team and not for other calls.

The process and outcomes will be monitored regularly for iterative improvement.

Improving the effectiveness and long term survival analysis after Code Blue

SVIMS is currently performing 'Analysis of Code Blue outcomes in Long term Survivors'. SVIMS is also conducting audit of the effectiveness of resuscitation as well as instituting 'Debriefing' after each Code Blue call. Further, all Code Blue responders are being trained in BLS/ACLS protocol of American Heart Association, through SVIMS International Training Center, designated by AHA.

SVIMS NEVER EVENTS

First introduced in 2001, the term 'Never Events' refers to shocking, egregious, unambiguous and measurable **events that should never occur in healthcare**. During the last 15 years, a list of such highly serious adverse events have been catalogued in many countries. These events result in death or significant disability and are preventable. SVIMS has started measuring each of these 'Never Events' and has put in place safety parameters to mitigate any harm with the goal to eliminate them. Thus, SVIMS become the First Health Care System in India, to voluntarily report safety record, towards continuous quality improvement. Never Events indicate fundamental safety problems within an organization or system. They are grouped into 7 categories SVIMS will choose one from each of these groupings as outlined above & will methodically put in place safety measures to eliminate them:

Never Event Category	Indicator	
	Description	Benchmark
Care Management Events	Stage 3 & 4 Decubitus ulcer during hospital	**0**
Administration of drug or biological	Mismatched Blood Transfusion with serious harm.	0
Radiological Events	Metallic object in MRI suite causing injury	0
Environmental Events	Falls in hospital premises with serious injury	1
Procedure Events	Wrong site/wrong patient procedure	0
Device Events	Foreign object unintentionally left inside body during surgery	0
Patient Protection Events	Misidentification or missing baby	0

On 12-07-2016, Hon'ble Health Minister, Dr. Kamineni Srinivas garu unveiled SVIMS Website reporting of **one such never event, namely stage 3/4 Decubitus Ulcer.**

NEVER EVENTS AT SVIMS : SERIOUS SEVEN

i. Decubitus Ulcer - stage 3 /4

Decubitus Ulcer is also known as Pressure sore/bed sore. Since the monitoring started in September 2015 after the arrival of the new Director and **during the period Sep 2015 to 01st September, 2020, no stage 3 / 4 Decubitus Ulcer has developed in any patient as a result of stay at SVIMS.**

Even though only stage 3 and 4 Decubitus Ulcer are considered as never events, at SVIMS nursing section has started following all patients for the identification and corrective measures for stage 1 and stage 2 Decubitus Ulcer in order to prevent them progressing to stage 3 or 4. It is to be noted that stage 2 ulcers are observed only in patients who are transferred in with decubitus ulcers and no patients at SVIMS developed any stage 2 ulcers.

Definition:

Stage I: Redness without skin breakdown.
Stage II: Skin breakdown – Epidermis and Dermis.
Stage III: Full thickness destruction through dermis into subcutaneous tissue
Stage IV: Deep tissue destruction through subcutaneous tissue to fascia muscle, bone.

Measures taken for preventing stage III & IV. Never events incidence none.

Mismatched Blood Transfusions causing serious harm

Protocol for Prevention of Mismatched Blood Transfusion

1. Scope & Application

Never events are serious medical errors or adverse events that should never happen to a patient. Consequences include both patient harm and increased cost to the institution. Technicians and nurses provide a critical role in preventing never events through risk anticipation and adoption of evidence-based practice. Mismatched blood transfusion is one of the never events which should never happen in a hospital

2. Responsibility

- Staff nurse in donor section to correctly label the blood bag.
- The technician on duty in Red Cell Laboratory to correctly receive the blood sample and to issue the blood for which requisition is received.
- The staff concerned in the ward/OT to correctly label the sample and to transfuse the blood unit.

3. Reference

- Technical Manual, Directorate General for Health Services-2ndedition
- Model standard operating procedures for blood transfusion services, WHO
- NACO guidelines2015

4. Protocol

Checks at the donor blood collection section

- Each donor will be given a unique number and once his blood is collected, it is identified by that number only.

- Verify the donor's identity by tallying with the name on the donor card and the donor number.
- Write the segment number of the blood bag on to the donor card as a second check.
- Cross check the numbers on the bag, pilot tubes and donor card to ensure identity. Record the entry in the donor registers using the same number.

Checks while doing blood grouping and typing:

- One technician should do forward grouping from the segment of the blood bag by correlating the segment number and unique donor number with that entered in the donor card. Enter the results in the donor unit and in the donor cell grouping register.
- Another technician should do reverse grouping from the pilot tubes collected, by identifying the unique donor number. Enter the result in the serum grouping register. Both the forward and reverse grouping result should correlate each other

Checks at the component storage section

- All untested units should be kept in the unscreened Refrigerator / agitator.
- After testing is over, release the fully tested. Write clearly the unit number, date of collection and expiry and the volume on each colour coded label as per the grouping register records.
- After the bags are labelled, ask a second technician to double check the number and group on the bags tallying them with the records.

Checks in the cross matching section:

- Receive the requisition form along with the patient's blood sample. Check for patient's identity.
  Name of the patient, UHID number, age and sex should correlate with the blood sample and requisition form. Check the blood group with that of the blood group entered in the request. If there is any discrepancy, check the blood group of the received blood sample. If it correlates with the hospital information system, then ask the concerned ward staff to change in the request before proceeding with the cross matching.
- If there is no discrepancy between the HIS and the blood group in the request, proceed with the blood grouping of the patient with the currently received sample
- If there is no discrepancy then proceed with the cross matching. If still discrepancy persists, then the old blood sample might be a wrong sample. Trace back the old details and investigate where the fault is.
- Carry out compatibility testing using departmental SOP. In order to avoid outdating, implement FIFO policy
- The technician who is issuing blood should make entries in the cross matching form with counter sign from the medical officer.
- Make entries in the issue register and in the request.
- The receiving person should check the blood unit and the cross matching report from for any discrepancy

Checks at the ward/OT:

- Before administering blood component, FINAL IDENTITY -check of the patient, blood unit compatibility tag and the complete documentation should be done.
- Ask the patient, if conscious, to identify himself/ herself by name, spouse name, age or any other identification.
- If unconscious, ask relatives or any other staff to verify the patient's identity.
- Check that details on the compatibility tag exactly match with the documentation.
- Check the blood unit for any leakage and for any visible discoloration & expiry date
- Two different persons should do the check for patient's identity and the same should be documented.

5. Documentation

- Make necessary entries in donor register, grouping register, cross matching register, issue register, incident report register, critical value reporting register, cross matching form, case file.

iii. Metallic Object in MRI Suite causing injury

MRI SAFETY REPORT

The last unexpected event in MRI occurred on 10th January 2015 at 2.30 PM where in Oxygen cylinder was pulled in the magnet. However **no patient / personnel injury** or hardware loss was suffered. **No adverse MRI events during 2016, 2017 & also upto September 15th 2020.**

To totally avoid such situation in future following steps are being followed :-

1. Oxygen lines are made available in preparation area
2. Screening at inlet for oxygen cylinders is being done
3. Maintenance of routine duly signed MRI safety check list for all the patients is being done since from that time no such incident has occurred in our department.

Measures taken in SPMC Hospital to prevent baby abduction

- Standard Operating Procedures have been developed for security& ward staff in order to prevent baby abduction.
- ID tags tied to the wrist of the mother and baby immediately after delivery.
- Foot prints of the baby taken in the Case sheet/File immediately after delivery in the case sheet along with signature of responsible patient attender.
- Transfer out/discharge forms developed to transfer the baby with in hospital (Intra hospital) and outside hospital (Inter hospital), also for normal discharge.
- Baby will not be allowed to move outside of the ward without proper transfer out/discharge form and also without responsible attendant along with hospital staff.
- At the time of transfer out/discharge of the baby from the post natal ward/NICU the duty nurse along with doctor on duty and baby mother will sign on the transfer out/discharge slip which will be checked by security at Post natal ward &main entrance along with baby ID tag.
- Security guards at the Post natal ward and main entrance will record the details of the baby along with attendant details at the time of transfer out/discharge.
- CC Camera's were fixed at the entrance of the Post natal ward and at maintenance.
- Failure Modes Effects & Analysis (FMEA) done for baby abduction in July 2018 & surveillance through mock drills regularly conducted.

NO BABY ABDUCTION / MISIDENTIFICATION TILL DATE AT SVIMS

Healthcare Associated Infections (HAI)

Between 5% and 10% of patients admitted to hospitals acquire one or more infections, based on reporting data largely from developed countries. In the USA, it is reported that 1 out of every 136 hospital patients becomes seriously ill as a result of acquiring an infection in the hospital. It is estimated that in developing countries (including India) the risk of Healthcare Associated Infections (HAI) is 2 to 20 times higher than in developed countries. In India, indiscriminate use of antibiotics both in community settings and in hospital settings contributes to development of antibiotic resistance. Further there is need for robust reporting of HAI in India. This 'double-edged-sword' of indiscriminate antibiotic use and lack of reporting of healthcare associated infections needs to be addressed. The Director-cum-Vice Chancellor of SVIMS **Dr.B.Vengamma** announced that SVIMS is taking a step forward to contribute in containing HAI in India. Adapting international guidelines (eg WHO, CDC) SVIMS is invoking a ten pronged strategy. One key component is 'Antimicrobial Stewardship', which aims to optimize antibiotic use among patients in order to reduce antibiotic resistance, improve patient outcomes and safety and ensure cost effective therapy. Ex Hon'ble Health Minister of Andhra Pradesh, Dr. Kamineni Srinivas garu released the first edition of "SVIMS Antimicrobial Stewardship pocket guide" on 12.07.2016. This is revised 6 monthly and new editions are released every January and July to inform all health care personnel (doctors, nurses, and allied health staff) of pathogen surveillance, antimicrobial use, infection control measures and outcomes. This programme is jointly monitored by Hospital Infection Control Committee, Antimicrobial stewardship Committee and SVIMS Quality Council.

In India, indiscriminate use of antibiotics both in community settings and in hospital settings contributes to development of antibiotic resistance. Further there is need for robust reporting of HAI in India. The Director-cum-Vice Chancellor of SVIMS Dr. **B. Vengamma** announced that SVIMS is taking a step forward to contribute in containing HAI in India. Adapting international guidelines (e.g. WHO, CDC), SVIMS is invoking a ten pronged strategy. One key component is 'Antimicrobial Stewardship', which aims to optimize antibiotic use among patients in order to reduce antibiotic resistance, improve patient outcomes and safety and ensure cost effective therapy. This pocket guide of SVIMS Antimicrobial Stewardship (fist Edition) is released on 12-7-2016 by Hon'ble Health Minister of Andhra Pradesh, Dr. Kamineni Srinivas garu. This will be revised 6 monthly and new editions will be released every January and July to inform all health care personnel (doctors, nurses, and allied health staff) of pathogen surveillance, antimicrobial use, infection control measures and outcomes. This programme is jointly monitored by Hospital Infection Control Committee and SVIMS Quality Council.

From the desk of editors……..

Greetings from Infection Control team,

- Antimicrobial resistance (AMR) results in increased morbidity, mortality, and costs of healthcare
- Prevention of the emergence of resistance and the dissemination of resistant microorganisms will reduce these adverse effects and their attendantcosts.
- Predominant isolates in ICU's were *Escherichia coli* followed by *Klebsiella*, *Acinetobacter*, and *Pseudomonas spp*.
- In ICU's empirical choice of antibiotic in our institute is Cefaperazone + sulbactam.
- Based on Gram staining report prophylactic drug of choice for gram negative bacilli is Cefaperazone + sulbactam, and for gram positive bacteria is Vancomycin in all ICU's.
- We therefore urge everyone to restrict the use of antimicrobial agents.

Key messages.....

Prevalence of Multi drug resistance (MDR) from January to June 2020 was – **54.9%**

Predominant isolates in intensive care units (ICU) were *Acinetobacter* followed by *Escherichia coli*, *Klebsiella*, *Enterobacter* and *Pseudomonas spp*. As per our local antibiogram, empirical choice of antibiotic in **ICU's** in our institute is **Cefoperazone+sulbactum.** In case of suspicion of *Pseudomonas* infections, empirical choice of antibiotic is Piperacillin+ Tazobactam. Based on Gram staining report, prophylactic drug of choice for Gram negative bacilli is **Cefoperazone+ sulbactam,** and for Gram positive bacteria is **Vancomycin** in all ICU's depending on the department.

Percentage of Vancomycin Resistance Enterococci (VRE): 5.7%

Percentage of Methicillin resistance *Staphylococcus aureus* (MRSA): 60.2%,

Percentage of Methicillin resistance *Coagulase negative Staphylococcus (*MRCoNS): 54%,

Percentage of Vancomycin resistance *Staphylococcus aureus* (VRSA): Nil.

Percentage of Vancomycin resistance *Coagulase negative Staphylococcus* (VRCoNS): Nil.

- ✓ Most common Gram negative isolates were *Escherichia coli, Klebsiella spp, Acinetobacter spp and Pseudomonas spp.*
- ✓ *Escherichia coli* isolates were highly resistant to Cefazolin (89.8%), Ciprofloxacin(89.6%), Cotrimoxazole (63.4%) and sensitive to Amikacin (81%), Cefoperazone+sulbactam (84.9%), Gentamicin(75%),Piperacillin+tazobactum(85.4%),Meropenem(97%)and Colistin/Polymyxin B (99.8%).

All *Klebsiellae spp* were sensitive to Meropenem (69.2%) and Colistin/Polymyxin B(98.1%).
- ✓ *Acinetobacter spp.* isolates were highly resistant to Cefazolin (96%), Ciprofloxacin (75.4%), Cotrimoxazole (80.1%), Amikacin (57.7%), Gentamicin (55.9%), Piperacillin +tazobactam (68.2%), but sensitive to Cefoperazone+sulbactam (83.1%), Meropenem (59.6%) and Colistin/Polymyxin B (99%).
- ✓ *Pseudomonas spp.* isolates were highly resistant to Ciprofloxacin (88%), Ceftazidime (68%), ,Amikacin (60.8%), Gentamicin (77.6%),and sensitive to Piperacillin +tazobactam (76.8%), Cefoperazone+sulbactam (66.4%), Imipenem (55.2%) and Colistin/Polymyxin B(100%).

  So cautious prescription of carbapenems required.

Note : Empirical therapy should be reviewed once the culture and susceptibility results are ready (usually within 72 hours) and targeted therapy should be done whenever possible to give the narrowest spectrum antibiotic based on culture and sensitivity data, the site of infection and the clinical status of the patient.

Revision of Antibiotic policy as per WHO 2016 guidelines:

As part of the review of antibacterial agents, a new categorization of antibacterial agents into three groups was proposed:

- ACCESS – first and second choice antibiotics for the empiric treatment of most common infectioussyndromes;
- WATCH – antibiotics with higher resistance potential whose use as first and second choice treatment should be limited to a small number of syndromes or patient groups;and
- RESERVE – antibiotics to be used mainly as 'lastresort'treatment options

SVIMS and SPMC Hospital

In order to improve efficiency, effectiveness and reduce Non Performing Assets (NPA) in the health system, SVIMS has put forth an accountable system of making a full list of Biomedical Equipment and enumerate the functional status of each and every equipment. The goal is to ensure that 99-100% of equipmentare functional and repairs are done in a timely fashion according to benchmark (days in disrepair). In addition all equipment will be listed with their price and date of commissioning in the website. As on October 2020 the following functional equipment benchmark is shown. The details are listed in nextpage.

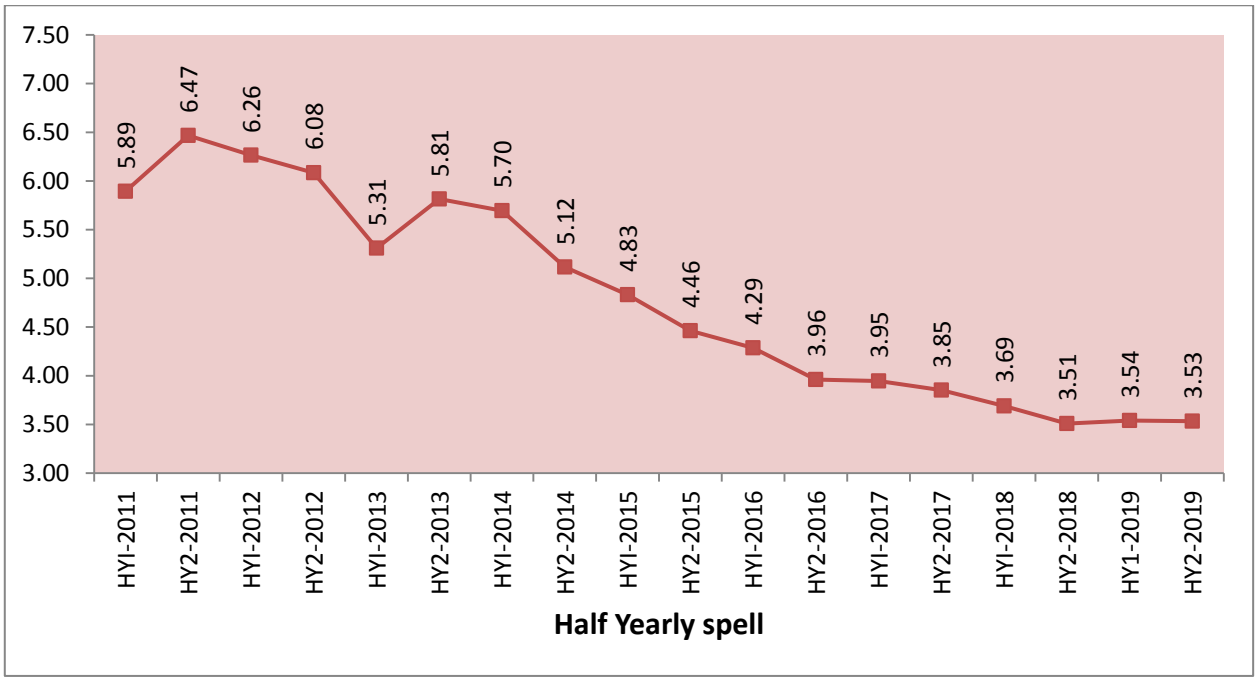
MORTALITY

SVIMS instituted mortality reduction & quality improvement strategies along a novel strategy of "Multiple Sequential Wedges of improvement". Each set of quality improvements is introduced every 6 months & effects measured. These '6 month spells' of average mortality rate are represented in the graphs.

SVIMS Gross Death Rate(%) during 2011-2019 (till September)



SVIMS Net Death Rate (%) during 2011-2019 (till September)
